

ENVIRONMENTAL POLICY

Lund Halsey are the market leaders in the design and manufacture of Technical Furniture, providing the definitive solution for Industrial Control Rooms, Air Traffic Control, Power Generation, Broadcast Studios and Surveillance.

We recognise the need for sustainable development and continually aim to improve the environmental effect of our activities.

To achieve our aims, we will:

- Ensure that, as a minimum requirement, we conduct our operations in full compliance with all relevant legislation, regulations, and environmental codes of practice applicable to our operations
- Protect the environment from our activities, including prevention of pollution
- Seek to continually improve our environmental performance and our environmental management system by setting and reviewing environmental aspects, objectives and targets, making environmental improvements and monitoring performance by regular review
- Consider any environmental issues as part of our normal decision-making process
- Develop relationships with suppliers and contractors and encourage them to manage their environmental impacts more effectively
- Review this Environmental Policy at least annually, or when there are any significant changes either to our operations or to environmental legislation.

Our immediate environmental objectives are:

- Continue to monitor and, if possible, reduce energy use in the building. This includes projects to replace windows for draft proof and energy efficient double glazing, consider financially viable options to insulate the roof and improve energy efficiency of heating systems and controls
- To take all measures to improve energy efficiency in our own buildings
- Reduce manufacturing waste and improve the percentage of waste that is recycled
- Actively promote the re-use of packing materials where economically viable to return to the UK

This policy will be made available to all interested parties on request via our website.
